Other types of
Testing

Test Results

Dashboards

Stakeholder Based
Reports

Consolidated Report

Bug Reporting

Centralized Repository

Agile requirement gathering

- Record the requirements in the form of audio and video with “Requirement Scenario”
- View/Play back recorded requirements with “Requirement Scenario”

Test Management

- Easily create Test Plan, Tasks, and Milestones
- Easily assign tasks to resources and track the progress of the activities
- Identifying the Critical Path is simple
- Review Test Case with Workflow
- Traceability
- With the help of Test Analytics get useful information on project, resource and also it helps in planning

Test case development

- Easy to Create manual test cases
- Easy to Create automation test cases
- Easy to Manage captured objects
- Easy to re-use test case steps with the ‘reusable’ option

Manual process

- Simple to create and store manual test cases
- Import Test cases from other sources
- Record manual test execution
- Reduce operational issues

Automation process

- No need of technical expertise to Create automation test cases
- Capture objects with Object Spy

Test Execution

- Simple to Create preferred Test Suites
- Categorize types of testing
- Execute multiple test suites at a time
- Run Functional, Performance, Security and other types of testing
- Manage test execution progress with “Manage” feature

Functional Testing

- Perform automated functional testing for Web/Enterprise/ Mobile applications
- Manual functional testing for Web/Enterprise/Mobile applications
- Discover valid defects early in the overall product development process

Performance Testing

- Perform performance testing for Web/Enterprise/Mobile applications
- Identifying bottlenecks
- Validate application **SCALABILITY**, **RELIABILITY** and **RESOURCE USAGE**

Security Testing

- Perform security testing for Web/Enterprise/Mobile applications
- Identifying potential security problems and their impact

Other types of Testing

- Web services testing
- UI testing
- Cross browser and cross platform testing (web apps)
- Parallel execution across browsers, browser versions and platforms (web apps)
- Parallel execution across platforms (enterprise apps)
- Parallel execution across platforms and devices (mobile apps)

Test Results

- View executed scripts in a graphical and grid view for passed test cases
- Screenshots for failed test cases and not executed test cases

Dashboard

- Monitor test activities in a quick view
- View report on test progress
- View the projects and their testing progress
- Identify test areas which might require additional effort

Stakeholder-based Reports

- Get stakeholder role-specific reports
- Check status of on-going testing activities and results

Consolidated Report

- On-demand consolidated report in a single version
- View test results of projects

Bug Reporting

- ClicTest can be integrated with any bug tracking tool
- Post bugs that found while testing without any manual effort
- Bugs can also be posted with our own proprietary tool call “ClicBug”
- Overall view of all defects can be seen in dashboard of ClicBug

ClicTest Advantages

- One-stop software testing solution
- Pay only for what you test
- Supports complete Software testing life cycle
- Cloud based solution
- Manual and Automation Test Cases can be maintained in centralized repository
- Record requirements in terms of audio and video
- Traceability Matrix
- No Technical knowledge required for Automation testing
- Automation Test Case creation is simple as filling web form
- Test Case Versioning and Version Comparison
- Parallel Execution for Web applications across different Browsers, Browser Versions and Platforms
- Schedule Test Execution
- Screen shots for failed Automation Test Cases
- Record Manual Test Execution
- Post bugs without any Manual effort
- Use Functional Test Case as input for Performance testing
- Dynamic Ramp up for performance testing
- Monitoring Graphs like CPU, Memory and Network usage during execution of Performance Scenario
- Iteration Wise Results for Automation test cases, Manual Test cases and Performance Scenario's
- Stake Holder Based Reports, Dashboard & Consolidated Report
- End-to-End software testing

About ClicTest

ClicTest is one of the few leading product-enabled Independent Software Testing companies, provides wide range of software testing services and comprehensive, tailor-made solutions. ClicTest as one stop platform for all the testing needs helps enterprises in mitigating tedious software testing process and increase productivity. ClicTest can address the challenges involved in both manual and automation testing processes and enables enterprises to focus on other businesses activities. ClicTest's solutions allow enterprises significantly improve software quality while reducing testing costs and complexity even in the most rapidly changing environments.
